Phishing Quiz!

https://phishingquiz.withgoogle.com/

And a fun story

Your Devices

- Lock your devices (pin, biometrics)
- Patch/Update
- Connect to WiFi that you <u>trust</u>
 - Use Your Own Mobile HotSpot, if needed
- Set Location and Privacy settings
- Use <u>trusted</u> software, apps, and USB devices
- Install anti-malware software (not iOS)
- Backup all important data

When Surfing the Internet

- Validate people are who they say they are
- Interact with only <u>trusted</u> persons and companies
- Assume everyone can read your posts
- Don't share or use the same password everywhere
- Don't open or install anything that you don't know
- Use two-factor authentication
- Avoid using public computers
- Be careful clicking on e-mail links and when entering your username and password

When Traveling to High Risk Countries

- Don't bring electronics, if possible
- Use a "fresh" laptop and phone
- Bring only essential documents
- Know the local laws, e.g.
 - Whether you can refuse to unlock your devices for law enforcement

- Whether the encryption you are (hopefully) using is legal
- Upon your return, copy out only the files you need, scan them for malware, and wipe everything else

Children

- Have open conversations
- Teach them to be skeptical
- Watch for behavioral changes
- Check cell phone activity
- Online safety education: netsmartz.org/TipSheets

Not a matter of privacy: It is a matter of keeping our children safe

Good Detection Practices

- Obtain and review free credit reports
- Set bank and credit card alerts for every transaction
- Check your "trusted applications"
- Check your login activity logs (offered by some services, like Google)

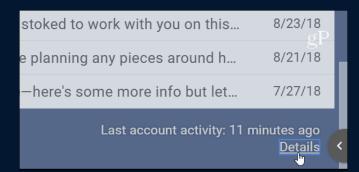

Most crimes go undetected, so use these detection practices.

Good Detection Practices

• Check your login activity logs for your e-mails and most important applications

Good Detection Practices

• Check your trusted devices and third-party apps

(our devices	Third-party apps with account ac-
/ou're currently signed in to your Google Account on	cess
Windows Ladue, MO, USA	You gave these sites and apps access to some of your Google Account data, including info that may be sensi- tive. Remove access for those you no longer trust or use.
iPhone United States - 4:06 PM	Microsoft apps & services Has access to Gmail
Find a lost device	
Manage devices	Manage third-party access

Technical

- Use a trusted VPN provider when on untrusted WiFi
- Use a firewall
- Use WPA2 encryption for WiFi
- Segment your network
- Store sensitive documents using encryption
- Turn on anti-theft options (e.g. "Find My" for Apple Devices)
- Use password vault and/or single-sign on solution

Insurance

- Fraud
- Information or Cyber Security
- Check your policy for details

If Something Goes Wrong

- Disconnect any affected device(s) from the Internet
- Change your password for any affected service
- Contact
 - The platform (Facebook, Twitter, etc.) and business (bank)
 - Credit bureaus (Equifax, Experian, Transunion)
 - Law enforcement
 - Alfizo (929-525-3496 or gchan@Alfizo.com) if you need additional support
 - Your insurance company
- File complaint online: <u>https://www.scamaddicts.com/fraud-resources</u>

Recap

- Who I am
- Individuals vs. Businesses
- Information Security vs. Anti-Fraud vs. Privacy
- Why you should care about information security
